RE: Labadie power plant emissions

I am a long-time resident of Franklin County and have children and grandchildren living not too far from the Labadie power plant. With Labadie being the largest SO₂ emitting plant in the country that does not have scrubbers installed, I am very concerned about health especially of my grandchildren since children along with older adults and asthmatics are especially at risk with high SO₂ emissions.

With the Labadie plant being the largest without scrubbers, please recommend a non-attainment status to this plant for the sake of citizens' health.
